

### Overview

SITRANS FVA250 variable area meter

### Benefits

- Standard design available at short notice
- Robust all-metal fitting with impact-resistant housing cover
- Can also be used for corrosive and flammable media
- Use possible at high pressures and temperatures
- Product and percentage scales
- Can be optionally fitted with heating and cooling sheaths
- Contamination-insensitive guiding of float

### Application

The devices are particularly suitable for measuring:

- Water
- Liquids
- Anti-corrosives and lubricants
- Solvents
- Saturated and superheated steam
- Food and beverages
- Industrial gases

### Design

Due to its full metal design, the SITRANS FVA250 variable area meter with a standard length of 250 mm (9.84 inch) can be used to measure many different types of liquids and gases passing through closed piping. The robust design means that it can also be used in harsh conditions. The various types of flange connections, linings and float materials satisfy the requirements of the pharmaceutical and chemical industries.

The measured value is displayed directly on the scale with the standard version. For process monitoring and control, the device can be equipped with a transmitter (MEM) as well as limit switches.

### Function

Flow measurement with the SITRANS FVA250 is performed according to the float principle. The flowing medium lifts the conical float in the measuring ring. This increases the ring gap until an equilibrium is established between the buoyant force of the medium and the weight of the float. The height of the float is directly proportional to the flow rate. The movement of the float is transmitted from one magnet to another magnet in the display unit outside of the measuring tube.

#### Technical specifications

<b>Application</b>	See page 3/401
<b>Design and function</b>	See page 3/401
Measuring principle	Variable area flowmeter
<b>Input</b>	
Measuring range	See table on page 3/403
Pressure rating	PN 16 ... PN 100 (232 ... 1450 psi) depending on version (see table on page 3/403)
Installation/flow direction	Vertical/from bottom to top
<b>Rated operating conditions</b>	
Ambient temperature	
• With local display	-40 ... +80 °C (-40 ... +176 °F)
• With limit switches	-40 ... +65 °C (-40 ... +149 °F)
• With electric remote encoder (MEM)	-40 ... +70 °C (-40 ... +156 °F)
Measuring accuracy	
• For liquids	± 1.6%
• For gases	± 2.0%
Reproducibility	0,5 % of the measuring range limit (URV)
Operating temperature	see page 3/403
Operating pressure	Min. operating pressure > 2x pressure drop (see table on page 3/403)
<b>Design</b>	
Flanges	EN 1092-1, ANSI B16.5
Material	
• Fitting	Stainless steel 1.4404/316L
• Float	Stainless steel 1.4404/316L, Hastelloy, PTFE
• Wetted parts materials	Stainless steel 1.4404/316L, PTFE, Hastelloy, depending on version
Degree of protection (display unit)	
• Display unit made of aluminum	IP65
• Display unit made of stainless steel	IP66
<b>Electromagnetic immunity</b>	
• EN 61000-6-2: 1999	Interference immunity industrial sector
• EN 50081-1	Emitted interference residential sector
• EN 55011: 1998 + A1: 1999	Group 1, Class B

#### Float damping

Float damping is recommended

- Generally for gas measurement
- When air bubbles in the medium cannot be avoided.
- When there are pressure surges in the lines caused by a delay in the flow, for example, due to rapid throttling or blocking
- When turbulence, pulsations or other instabilities cause the float to vibrate.
- When the flow pressure cannot be built up slowly
- When vibrations in the line cannot be avoided
